RENNRAD  
Mobility For Kids And  
Youngsters

## See the world with a child's perspective.

Our unique product is designed for children to learn bike riding with ease. RENNRAD bikes focus on the fundamentals: balancing, leaning and steering. First, the simple, no-pedal design ("pushbike mode") builds confidence and eliminates fear by allowing kids to have their feet on the ground and progress balancing and riding at their own pace. When the time is right, parents can simply assemble the "drive unit" to let the learning continue in "cycling mode". Thanks to the unique preassembled pedal unit design!

Child Safety is the most important thing in any situation! Our 2-in-1 bike is developed together with German pediatricians. The running and pedalling combination helps children grow confidence and security for a safe and fun ride. By the way, "RENNRAD" is German for "Run bike".

Adjustable brake lever

Handlebar impact protection

## FEATURES

Safety - Parts of the bike are covered and cushioned so your children can explore the world of cycling without pain and injuries. Front and rear reflectors plus reflective tires make sure your child can be easily spotted by people. We call this active security

weight - Most parts are made from high grade aluminum, this reduces weight dramatically and increase the riding pleasure

Riding resistance - High-pressure tires and low friction ball bearings reduce ride resistance, your children will simply ride easier and more relaxed.

Product certification - All RENNRAD bikes passed the test of EN71-1/2, ISO8098, CPSC, CPSIA, ASTM.
